CHAPTER 1. INTRODUCTION TO NSV

1.1 Introduction

Network Survey Vehicle (NSV) is used for automatic collection of Road inventory & Pavement condition related data required for Road Asset Management, Pavement Maintenance Management System and Road Safety Audit Related Studies.

.

1.2 Benefits of good data collection

- Collected data can be location-referenced accurately and related to other information i.e. construction type, data etc.
- Timely capture of condition / performance information so that it can be applied to produce robust asset management outcomes and enable informed transparent decision making.
- Baseline of existing asset ownership and condition is established against which future activities can be compared.
- Provides a snapshot of the current pavement condition and a starting point for any forward modelling and analysis for exploration of different future scenarios.
- Identified maintenance needs and risks can be planned for and managed.

1.3 Benefits of NSV Survey

- Rationalization of network data for manipulating and generating a variety of reports
- Determining appropriate distress bins or Pavement Condition Index (PCI) to assign current performance to facilitate reporting, - i.e. good, fair, poor condition etc.
- Generating tabular reports and developing correlations between current condition and age of network, road category and section level.
- Generating graphical reports of current network performance at network, road class and section level.
- Generating map-based reports defining current condition for several distress indicators at network, road class and section level.
- Consolidating the above visual reports into a document that outlines the current condition of the network following the completion of this report a detailed presentation is generally recommended.

CHAPTER 2. SCOPE OF WORK

The scope of Work includes performing Road Inventory and Pavement Functional Condition Survey and Preparation of Physical Report on Condition of Existing Pavement Characteristics using NSV for One laning restoration/rehabilitation of Lunglei to Tblaung on NH-302 in the State of Mizoram.

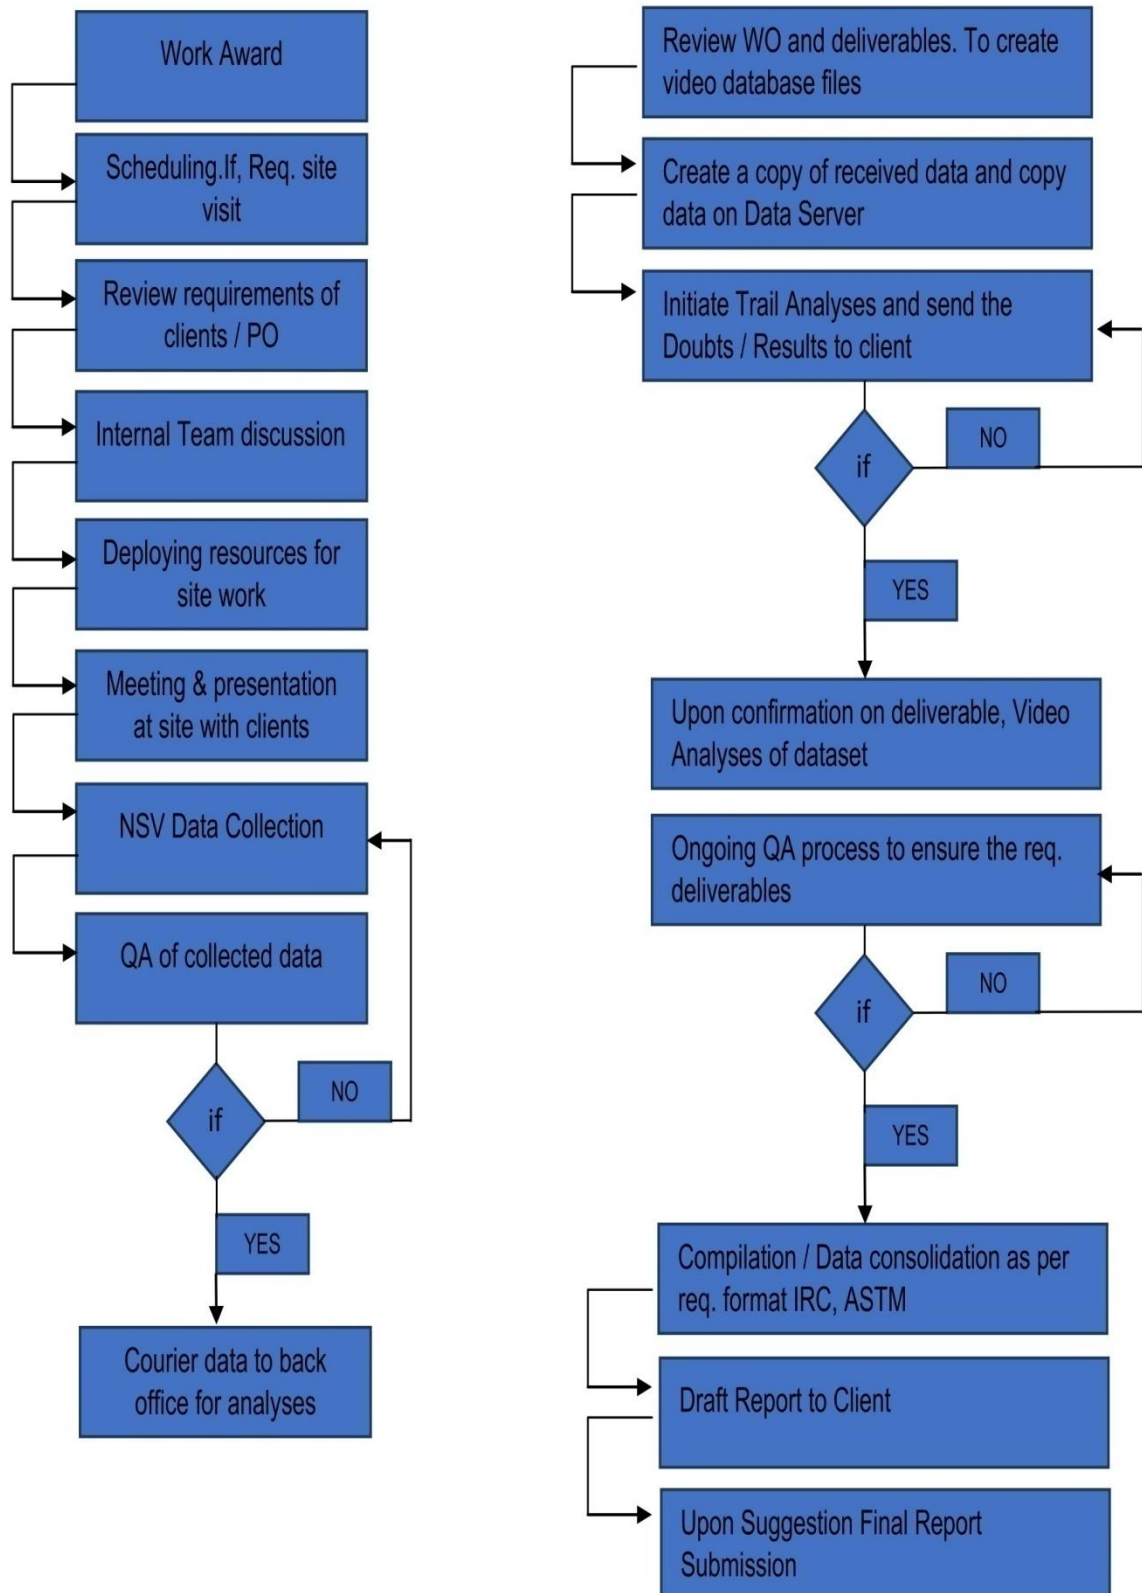

2.1 Survey for Inventory of Road

GPS coordinates, Pavement Type, Pavement Width, Terrain, Land use, Shoulder type And width, Drain Type and Width, Median Type and Width, Wayside Amenities, Crash Barrier, Signage etc.

2.2 Survey for Condition of Road

Roughness, Rutting, Distresses (cracking, Potholes, Bleeding, Surface failure etc.); (Note- All inventory items shall be recorded for each lane and Geo-tagged)

CHAPTER 3. DATA COLLECTION AND METHODOLOGY

CHAPTER 4. ROAD INVENTORY DATA

4.1 Location Reference Post (LRP) Master

The following details were collected for LRP Master

NH Number	LPR Name	Chainage (km)	Direction	Latitude	Longitude	Survey Date	Section Code
NH0302	Road Start	0+000	Both	22.85007457	92.79418405	22-12-2020	LUN-TAL

5.2 Roughness

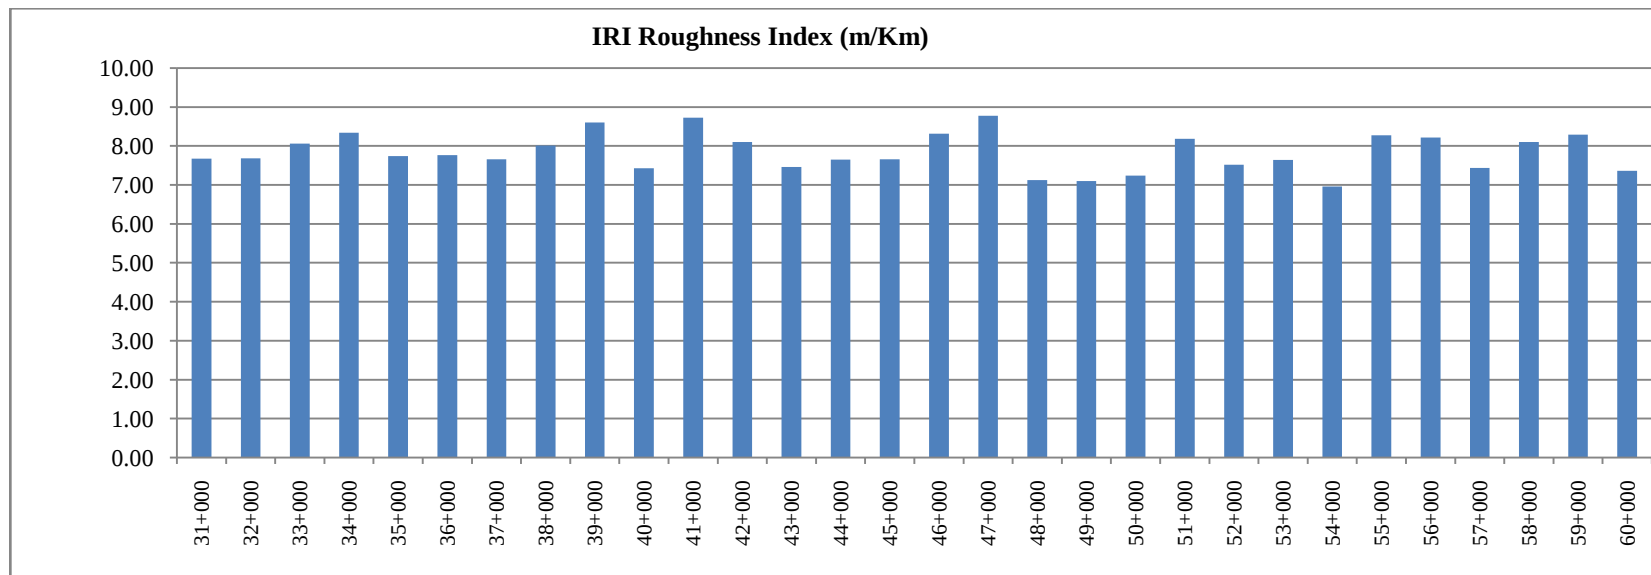

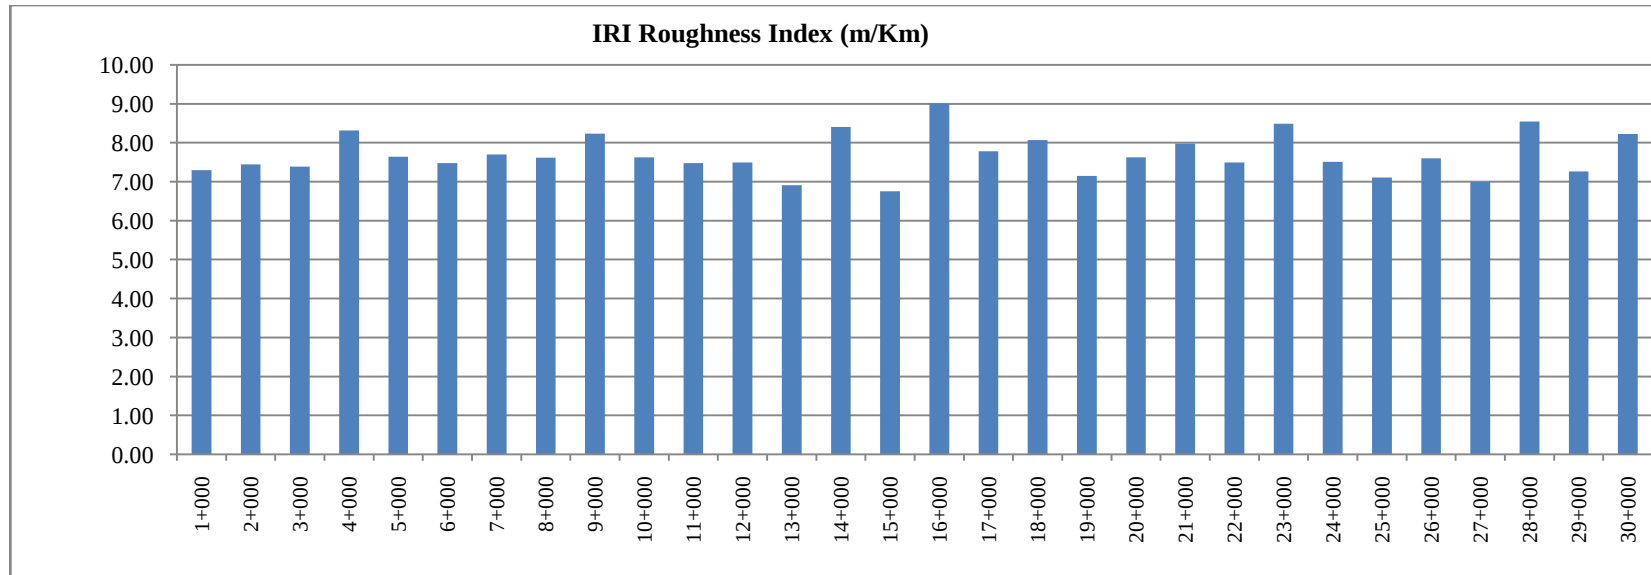

The subsequent tables show the roughness value measured at 100 m interval respectively. Roughness is measured in terms of IRI (m/km) and representative BI Value (mm/Km).
